No figures are available for Cachar for the years 1890-91 to 1895-96 and for Sylhet for the years 1890-91 to 1893-94. Apart from this, the figures up to 1897-98 are incomplete inasmuch as up to that year Sylhet figures (for the years 1894-95 to 1897-98) represented only the area of the Jaintia Pargana and Partabgarh, and those of Goalpara only the permanently settled tracts. Cachar figures for 1896-97 and Lakhimpur for 1890-91 to 1892-93 were also for a portion of the district, and until 1895-96 the figures for the five upper districts of the Assam valley related only to tracts cachastrally surveyed and to unsurveyed Khiraj lands and tea estates. In 1900-01 and 1901-02 figures for the permanently settled tracts of Goalpara were not returned.

These facts explain the sudden increase in area from 1898-99 and also the shrinkage in 1900-01 and 1901-02.

The low figure in 1906-07 is due to a revision of estimate of the area in Sylhet in that year, which was again revised in the next year and the figure raised.

In these circumstances it is impossible to estimate the extension of cultivation in this circle since 1890. But compared with the years 1898-99 and 1899-00 when complete statistics for all the districts were available for the first time it would appear that in the last 14 years there has been an extension of about 10 per cent. in the area under crops. Assuming that the increase has been going on a uniform rate since 1890, the total increase in the average since that year would roughly be about 15 per cent. The extension of area under food grains has been more and it will not be a very wide guess to put it down to 25 per cent. since 1890.

From these figures it would appear at first sight that cultivation of tea was being replaced by that of other crops. But this is not really so. In the earlier years of incomplete statistics, tea-estates were mostly returned while other steas were not, and consequently the

area under tea contributed comparatively a larger proportion of the total area than in recent years when complete statistics have been available. As a matter of fact the extension of the area under Tea has been the same as that of the total area.

under Important Crops.

and 1899-1900 = 100.

As explained in the Chapter III no record is maintained in Bengal of the cropping of each field from year to year and accurate statistics of agriculture are not available. The figures are all estimates prepared by Collectors of districts and are not sufficiently accurate to form the basis of a reliable comparison between the results of successive years.

Roughly speaking, however, there has been some extension (say 5%) of the area under cultivation during the last 20 years, although the figures do not bear this out. Tillage is extended by clearing the forests in the submontane terai, by reclaining the marshy areas, the level of which is being gradually raised by silt deposits, and by bringing under the plough the churs that are constantly being formed by the great rivers.

^{1.} The areas under current fallows for the years 1890-91 to 1896-97 are not available. It has therefore been assumed that the total cultivated area, i.e., the area not cropped, plus the area fallows remained the same throughout the period in question.

In this circle there has been a large extension in the area under Jute mainly at the cost of the area under foodgrains. Wheat has almost disappeared but rice has apparently kept its ground.

^{1.} These figures do not include the area in the Chittagong Hill Tracts for which complete information is not available.

2. The districts of Balasore. Angul. Puri, Backergunge and Chittagong were cadastrally surveyed in the years 1894-95, 1908-09, 1887-98, 1904-05 and 1897-98 respectively. These surveys have enabled more reliable estimates to be framed of the normal areas under enitivation. Subsequent estimates of acreage actually under cultivation year by year have been based on these normal areas as well as the character of the seasons concerned and are therefore more reliable than those published for previous years. An examination of the figures for the years prior and subsequent to the date of completion of the survey operations shows that the total acreage figures of the Backergunge district prior to 1904-05 (the year of survey) were under estimates to the extent of about 200. The figures of the other districts are supported by those of the years subsequent to the respective surveys.

Area under Cultivation with Details of Crops, 1890-91 to 1911-12.

^{3.} As explained in the Chapter III no record is kept of the cropping of each field from year to year and accurate statistics are not available. The figures are all based on estimates prepared by Collectors of Districts and are not sufficiently accurate to form the basis of a schable comparison between the results of successive years.

^{4.} The earlier statistics are so defective that they do not afford facilities of comparison but roughly speaking there has been some extension (about 5 per cent.) in the area under cultivation during the last 20 years, the extent of which cannot be gauged, although the figures do not indicate any such extension. Tillage is extended by clearing forests and jungles, by reclaiming the sandy lands which are constantly forming in the big rivers and by embanking and draining lands in the littoral tracts.

Figures are all estimates prepared by Collectors of districts. For the earlier years they appear to have been pitched too high except in the case of Manbhum where the earlier figures were very low. The unreliability of the figures will appear clear from the figures of gross areas under cultivation for the Ranchi and Manbhum districts given below:—

Ranchi: . Manbhum	•	1890-91. . 2,378 . 955	1891-92. 2.378 878	1892-93. 2.612 998.	1893-94. 3.171 879	1894-95. 3,069 807	1895-96. 3,095 825	1896-97. 2 804 643
Ranchi . Manbhum	•	1897-98. . 3.258 . 1.606	1898-99 3.120 1.688	1899-00. 2,525 1,523	1900-01. 1,627 1,445	1901-02. 1,012 1,530	1902-03. 1,000 1,483	1903-04. 1.415 1,379

In Ranchi the figures up to 1899-00 were clearly over estimates. In 1900-01 the high figures attracted the attention of the District Officer and he reduced them more or less arbitrarily to 1,627. This was still further reduced in the following two years to 1,012 and 1,000 respectively. In 1903-04, the previous years' figures were considered to be too low, and the total acreage was guessed to be somewhere about 1,400 or 1,500 and the figures have until 1909-10 ranged about these figures. The survey and settlement operations recently completed, however, showed that the area under cultivation was 2,343.

Similarly in the case of Manbhum in the year 1897-98 the Collector revised his estimates and raised the figure from 800 to 1,606 or,

by 100 per cent.

The figures are, therefore, entirely unreliable and no idea can be formed from them regarding the extent of the extension or otherwise.

The figures are, therefore, entirely unreliable and no idea can be formed from them regarding the extent of the extension or otherwise are the commencement and close. of cultivation. In order to gauge the extension of cultivation it is necessary to have reliable figures at the commencement and close of the period under investigation and the above figures are useless for this purpose. The settlement officer reports that some villages in the Ranchi district were surveyed about 30 years ago, and the figures for this tract may be relied upon to some extent and that on a comparison of these figures the extension of cultivation since 1890 might be roughly estimated at about 15 per cent. This percentage may be taken roughly to indicate the extension of cultivation in the whole circle.

^{1.} Figures are all estimates prepared by Collectors ci districts.

^{1.} Figures are all estimates prepared by Collectors of districts.

2. The districts of Patna, Saran. Champaran Muzaffarpur, Durbhan, a, Bhagalpur and Sahalad were all cadastially surveyed in to be framed of normal areas under cultivation. Subsequent estimates of acreage actually under cultivation year by year have been based the previous years. An examination of the figures for the years prior to and subsequent to the date of completion of the survey operations the extent of 50 and 100, respectively. Also the total figures of the Bhagalpur district prior to 1907-08 were over estimates to the extent therefore that there should be a net decrease of 150 in the total figures of the circle for the earlier years.

3. As explained in Chapter III no record is kept of the cropping of each field from year to year and accurate statistics are not available.

years.

^{4.} The earlier statistics are so defective that they do not afford facilities of comparison, but roughly speaking there has been some figures do not indicate any such extension. Tillage is extended by clearing forests and jungles and in the submontane Tarai.

years 1908-09, 1900-01, 1898-99. 1894-95, 1897-98, 1906-07, and 1910-11, respectively. These surveys have enabled more reliable estimates on these normal areas as well as the character of the seasons concerned and are, therefore, more reliable than those published for shows that the total acreage figures of the Patna and Muzaffarpur districts prior to 1908-09 and 1896-97 were under estimates to of about 300. The figures of other districts are supported by those of the years subsequent to the respective surveys. It appears

able. The figures, which are very rough estimates, are not sufficiently accurate to form the basis of reliable comparison between success is extension (about 5 per cent.) in the area under cultivation during the last 20 years, the extent of which cannot be gauged, although the

^{1.} Areas for what was known as the family domains of the Maharaja of Benares have been excluded from 1910-11, as since the

constitution of the Benares State, such areas were not returned.

2. Besides figures shown above under oilseeds which represent areas under "pure "oilseeds, i.e., oilseeds, sown unmixed with any other crop, there were other areas thinly sown in combination with other crops but details of which are not available.

^{3.} High figures under Fodder Crop in 1896-97 is due to the inclusion of the area under rice in the Benares District where the former crop failed altogether in the area under "fodder crop."

4. From the Index Numbers of gross areas cropped in this circle it would appear that virtually there had not been any increase in the area under cultivation. The slight extension in any particular year or a period extending over three or four years is rather due to the favourable seasonal condition than to the extension of cultivated area. The greater part of the Province is highly cultivated and there is apparently no room for consideral le extension except in the summonume tracts.

Besides figures shown above under oil seeds which represent areas under "pure" oilseeds, i.e., oilseeds sown unmixed with The special characteristic features of the area of this circle is its peculiar liability to famine.

From an examination of Index Numbers of the gross area cropped it will be seen that there had not been any appreciable seasonal condition than to any extension of cultivated area.

Figures of Almora and Gharwal, the details of which are not available have been excluded.

Besides figures shown above under oil-seeds which represent areas under "pure" oil-seeds, i.e., oil-seeds sown unmixed with any From an examination of gross area cropped in this circle it would appear that up to 1900-01 there had not been any appreciable Numbers ranged on an average about 104 representing a 4 per cent. rise in the cultivation. This nominal extension is rather due and there is apparently no room for considerable extension except in the submontane tracts.

As explained in the Chapter III the figures in the Punjab up to 1905-06 did not represent the actual acreage but only the the areas actually sown have been shown in the Agricultural Statistics. For facility of comparison it was therefore necessary ment under the several crops throughout represent areas on which the crops matured. The areas which failed to produce any From an examination of Index Numbers of gross area cropped in this circle it would appear that there had been an

(PUNJAB EAST.)

matured area, i.e., the area of each harvest reduced to a conventional standard of normal productiveness. From 1906-07 to obtain figures for matured areas for the years 1906-07 onwards from the Directors of Agriculture. The figures in this state-crop have also been shown separately.

extension of cultivation on an average of about 15 per cent. This is mainly due to the progress in irrigation.

Previous to 1901-1902 figures under current fallows were shown in the Agricultural Statistics as including the lands on which the crops of comparison with figures for the later years it was therefore necessary to deduct the figures under failed area from the area under Irrigated areas in the Punjab represent gross areas irrigated, i.e., land irrigated in both seasons have been counted twice.

As explained in the Chapter III the figures in the Punjab up to 1905-06 did not represent the actual acreage but only the actually sown have been shown in the Agricultural Statistics. For facility of comparison it was therefore necessary to obtain figures crops throughout represent areas on which the crops matured. The area which failed to produce any crop have also been shown From an examination of Index Numbers of gross area cropped in this circle it would appear that there had been as extension of

matured area, i.e., the area of each harvest reduced to a conventional standard of normal productiveness. From 1906-07 the area for matured areas for the years 1906-07 onwards from the Directors of Agriculture. The figures in this statement under the several separately.
cultivation on an average of about 6 per cent. This is mainly due to the progress in irrigation.

Area under Cultivation. Percentages and Index Numbers.

From an examination of the Index Numbers of the gross area cropped in this circle, it would appear that there was no extension of to 1894-95, are higher than those of later years owing to the Statistics of 44 Talukdari and 33 alienated villages in Ahmedabad, which were relinquished in 1895-96 owing to the introduction of enhanced rates under the revision survey. Similarly the slight rise during year 1907-08 estimates have been framed and included for all unsurveyed villages for which no figures were available before. It may This part of the country had been highly cultivated and there was really no room for any considerable extension. Moreover and which have not been fully replaced, retarded the growth of cultivation where it was possible.

cultivation, rather there was a shrinkage. This, perhaps, is not strictly correct, as the figures during the basic period, i.e., from 1890-91 had not been surveyed having been found to be unreliable, have been omitted from 1895-96; also large areas in the Kaira district 1906-07 to 1911-12 over the figures of previous years is due to the fact that the year 1906-07 was a favourable year and from the therefore be assumed that there has been no extension of cultivation in this circle.

The low acreage under wheat and linseed during 1895-96 to 1902-03 is mainly accounted for by the substitution of Kharif From an examination of index numbers of gross areas cropped in this circle it would appear that there had been an appreciable extention most marked rise is under Kondon and Kutki (which mainly represents the figures under other foodgrains), oilseeds and cotton. The expansion under Cotton is, perhaps, due to the stimulus of high prices.

of Crops, 1890-91 to 1911-12.

From an examination of Index Numbers for gross area cropped in this circle it would appear that up to 1900-01 there had indicate a rise of about 30 and 120 % respectively. The high rise during the two latter periods is more apparent than real as from in previous years. On the whole there has been some extension of cultivation, but it is not likely to exceed 10 or 12%.

of Crops, 1890-91 to 1911-12.

The index numbers of gross areas cropped show a rise of 10%, since 1890-91; but the rise is more apparent than real and is due accuracy the extent of the increase in the cultivated area

Area Under Cultivation with Details of Crops, 1890-91 to 1911-12.

From the Index Numbers of the gross areas cropped in this circle, it would appear that up to 1900-01 there had not been any appreci in the cultivation—lut this rise is more apparent than real, as from 1901-02 new areas were included in the returns of which no estimate of large Zemindari areas from that year, which were not returned before. On the whole in this circle the extension of cultivation

able extension of cultivation. From 1901-02 to 1906-07 the Index Number ranged about 111—representing an 11 per cent. rise or the earlier years is possible now. Similarly the high Index Numbers of the years 1907-08 to 1911-12 are due mostly to the inclusion if any, has been very small and is not likely to exceed 5 per cent.

The general increase from 1903-04 is due to high figures being shown in the Malabar district and that from 1907-08 to the inclusion of zemindary areas which were not returned before. The Collector explains that the settlement of all the Taluks in the District except Cochin was completed in 1903-04 and it was only after that that correct figures of collivation were reported in the Agricultural Returns. During the pre-settlement period, figures apparently approximate had to be adopted in the return in the absence of systematic villagewar accounts.

There is a rise in the index numbers of gross areas cropped from 1903-04 and a marked rise from 1907-08, but these rises are due to special causes explained above and do not therefore represent an increase in the cultivated area to the same extent. It is not possible to gauge exactly the extension of cultivation, but roughly speaking it may be estimated at between 7 to 8 per cent.

(MADRAS WEST.)

Coffee	6.7	6.3	5•7	5.7	6.1	5.8	6.2	6.4	6.1	6.0	3

From the above figures as well as from the index numbers below it would appear that the cultivation of coffee has been going down. Although the area under foodgrains has increased, the proportion which this area bears to the gross cropped area has been reduced from 70 to 65. At first sight this would lead to the inference that cultivation of non-food crops has been replacing the cultivation of food.

grains. But this is really not so. The decrease in the percentage is due to the fact that the addition to the area under "Fodder Crops and Orchards and Gardens" in the revision of 1903-04 and on the inclusion of the zemindary areas has been proportionately more than the additions under the other heads and consequently the percentages of these latter heads have dwindled down.

under Important Crops.

Note.—(a) "The line from Quetta to Bostan was completed in October 1886. The remaining portion of the Quetta loop, viz., from (b) "23 miles have not been included in it as that mileage was opened in a restricted sense and did not form a part of the

Railways at the end of each of the years, 1890-1912.

TE.—The figures for the following districts have not been included in this statement as complete information was not available.

(A) Lushai, Khasi, Naga and Garo Hills.

(B) Naini Tal and Lucknow.

(C) Upper Sind Frontier.

(D) Ellichpur, Bassein and Melaghat.

(E) Gaujam.

(F) Coorg.

(a) Reduction is due to the re-classification of the Gya-Salempore Road which was maintained as a metalled road before the construction of the Patna-Gya Rallway line (Gya District).

(b) Explanation about shrinkages in the Public Works Department roads in the Jullundhar District not available in this office (vide Secretary, Punjab Government, Public Works Department, No.1824-B., dated 14th November 1912).

(c) "The records previous to 1901 were destroyed, hence the discrepancy in mileage of roads cannot be explained" (Vide Executive Engineer, 1st Lahore Division, to Deputy Commissioner, Lahore, letter No. 1817-M., dated 14th December, 1912)

⁽d) The sudden and heavy reductions are assigned "to the fact that the roads in the old schedule were differently classified: some of the roads already under the category of metalled roads had been classed as unmetalled from this year." (Bankura District.)
(e) "Excessive number of miles during 1908 is due to "Mullagari" and "Khyber" roads having been included under metalled roads instead of unmetalled roads. The mistake was rectified during 1911 by transfer to unmetalled roads". (Peshawar District.)
(f) Decrease of 28 miles is due to exclusion of roads from the maintenance of the Local Board in the North Arcot District. (g) Reduction is due to the classification of the two classes of roads, metalled and unmetalled, separately, in the Combatore District: hitherto they were shewn conjointly.
(h) Reduction is due to the transfer of territories to Madras, North-East.

Mileage of Unmetalled Roads with Index Numbers.
